

Life Support Equipment

The following Life Support Equipment (Incubators, Respirators, Nebulizers and Ventilators) may be carried on board provided that:

- Dry or gel cell batteries are used for their operations.
- Confirmation from equipment manufacturer that same is certified for aircraft use.
- Doctor's prescription has been issued to justify their use.
- The equipment fits underneath a seat or can be strapped into an adjoining seat, in which case, the extra seat needs to be purchased.
- The Life Support Equipment and its power supply is correctly protected, packed where necessary and secured properly.
- No medical equipment shall be installed in the exit area.

For the carriage of Life Support Equipment on board, a request must be made to Air Mauritius Reservations at least 72 hours before departure.

Oxygen Kit

For passenger requiring oxygen in flight, a request must be made to Air Mauritius Reservations at least 72 hours before departure. The prescribed rate of flow must be specified in the request and will be subject to approval by Company Doctor.

Only the company's therapeutic Oxygen kit is allowed for use on board Air Mauritius aircraft.

Please contact Air Mauritius Offices for more information and applicable charges.
